

Manufacturing Manager

This worldwide company makes modern, professional geodetic equipment for highly accurate measurements. Their devices are used for surveying, to create maps and digital terrain models, for archaeological excavations and scientific research.

The new office in Budapest is looking Manufacturing Manager to join their team.

You will be in charge of all the manufacturing and sourcing at the company. You will be overseeing current production, launching new products and ensuring that we are in stock.

Tasks

Contract Manufacturing

Our main partner is a contract manufacturer in Mainland China. They offer turnkey production of our devices and handle almost all of the suppliers. Obviously, the production is only turnkey to an extent—we are still deeply included in the processes.

Basecamp. You will be in charge of the whole communication with the Contract Manufacturer. The main communication channel is Basecamp, but we also do weekly sync calls and monthly reconciliation calls.

Communication with the other teams. Some of the topics require participation of Finance, Sales, Hardware, or Electronics teams. So, it's important to make sure everyone knows what they should know. It's also important that you know about all such communication if it happens directly between another team and the Contract Manufacturer.

Inventory and Finance Management

You will be making sure that all the parties agree on the same numbers for payments and inventory.

- Stock take management and analysis
- Payment allocation
- Reconciliation calls

Planning and Orders

All the orders must be placed on time and delivered on time

- Production planning with Finance and Sales teams.
- Purchase order paperwork
- Control of the timely deliveries
- Accessories ordering. Can be with other suppliers, usually is a very easy process.

Sourcing

Sometimes we want to help our Contract Manufacturer to search for best suppliers. It requires market research, identification of supplier capabilities, creation of RFQ, and negotiation.

Delivery

Arrange non-typical deliveries related to production. For example, sending components for the first time from a supplier to the Contract Manufacturer, or sending samples from the Contract Manufacturer to the office.

Compliance

It's important to be compliant with everything that is required. You will be making sure we know of everything and we get everything.

Extra

- Contracts
- Proactive research for new materials and techniques
- Continuously look for new savings opportunities
- Research for risk management and diversification
-

Requirements

- Education: Bachelor's or Master's degree in Supply Chain Management, Logistics, Business Administration, or similar; or a degree in Electronics, Engineering, or similar
